

# OZpolish™ H2O

## Highlight

OZpolish H2O has selected Salts and Mineral that replenishes the aquarium old water which has not been changed for several weeks. It helps mimic the mineralized water that flows thru rivers and streams.

OZpolish H2O is especially recommended for the aquariums set-ups in localities with supplied water being hard due to dissolved calcium and magnesium. It is found to work as water softener by reducing gh. This could thus also reduce the white calcium scaling on the aquarium glass and equipment.

OZpolish H2O removes heavy metals from water. This is thus, another reason why it is beneficial for fish, shrimps, snails and turtles health. Beneficial for planted tanks too, even for a Hi-Tech heavily planted ones.

OZpolish H2O can also participate in building up or sustaining the good microbial base required for nitrification process in aquarium. It also has the processed salts that acts as electrolytes to help combat fish various diseases such as gills or fins rot, excessive mucous secretion etc.

## Composition

EDTA, Selected Salts and Minerals.

## Description

Why can't fishes live in Distilled Water (no TDS)? In hobby, aquarists may baffle on the optimal water quality. For all the concerns, no wonder, identified should be the top Solutions!

**Water Solution# 1. Nature Water:-** OZpolish H2O has selected minerals and salts that is needed for fish health & immunity and for aquarium sustenance between periods of water changes. Though this increases the TDS, it helps mimic the mineralized water that flows thru rivers and streams. *Increased TDS due to essentials, is good!*

**Water Solution# 2. Pollution Free:-** OZpolish H2O removes the contaminants, including heavy metals, without any expensive or complex filtration. It supports the growth of beneficial bacteria. *Good for underwater flora, fauna and microbes!*

**Water Solution# 3. Soft Water:-** OZpolish H2O has a safe Active Agent to reduce the calcium and magnesium deposition on glasses, equipment and plumbing. Regular usage could make glass clear and extend the equipment's life. *Makes inside aquarium clear vision!*

**Water Solution# 4.** Low Cost:-OZpolish H2O helps in reducing the aquarium maintenance cost, time & effort to the lowest possible; and saves the water. *Light on money, easy on hobby!*

**Instruction**– Sprinkle on the aquarium water.

**Easy Dose**– 1 spoon in every 200 litres of water weekly and at the time of water change. Proportionately adjust for less or more water. Dose recommended with a consideration of Fishes to Water Surface Area Ratio to 1:7.

**Precautions**– \*DO NOT OVER DOSE. Over dose will not speed water mineralization, instead it could raise the TDS high. \*Keep out of reach of children.

\*Made in India.

## FAQ

### Question:

Is it like a water conditioner...n if i use it then is there no need to put water conditioner???

**Answer:** In general water conditioner is a vague term. It must depend on your requirement. If you are asking for Chlorine remover, please use OZpolish De Chlorine. But, if your purpose is to enrich the aquarium water with essential minerals and remove contaminants & heavy-metals, please use it (OZpolish H2O).
